Due to a problem with the objective analysis for the period July 2010 to October 2010, the QC check of the profiles for this period has started at the end of august then the value of profiles detected by OA can be abnormally high for some DACs. The operator has also checked previous profiles for the floats of this period then you can find corrections on profiles with date older than 2010.

# 1. DAC AOML

Profiles detected by the objective analysis: 285 (profiles detected this summer are in blue in the following list)

### Example of corrections:

Many APEX floats show bad data, it seems coming from the decoding.
